Historical Note

The Morgan Construction Company was founded in 1891 in Worcester Massachusetts by Charles Hill Morgan and was acquired by Siemens Ltd. in 2008. The Morgan Construction Company was primarily involved in the creation of steel mills for steel companies domestically and internationally. The Morgan Construction Company was a family business that spanned 5 generations. Charles Hill Morgan was president from 1888-1911. Paul B. Morgan was president from 1911-1941. Philip M. Morgan was president from 1941-1965. Paul S. Morgan was president *from 1965-1986 and Philip R. Morgan was president from 1968-2008. The Morgan Construction company* also had close ties with its other family businesses in the beginning of the 20th century including the Morgan Spring Company and the Morgan Motor Company. Beyond steel mills, the Morgan Construction Company also made Morgoil bearings, Stelmor cooling systems and during WWII they made flame throwers for the M4A1 tank.

Significant inventions for the Morgan Construction Company and the founder Charles Hill Morgan include the Morgan continuous rod mill (1878), Reel for coiling wire-rod (1880), Shears for cutting rods while in motion (1893), Morgoil bearing (1931), No-twist mill (1963), and the Stelmor cooling system (1964) created in conjunction with the Steel Company of Canada (Stelco).
