This poster represents the work of WPI first-year students submitted to the faculty as evidence of completion of a course requirement for the Great Problems Seminar (GPS). WPI routinely publishes these posters on its website without editorial or peer review. For more information about the GPS program at WPI, please see https://www.wpi.edu/academics/undergraduate/great-problems-seminar.
Rooftop Rainwater Collection System on Foisie Innovation Studio

Nolan Bell (ME), Dylan Felty (CE), Chenggu Wang (ME), Katherine Williamson (ME)
Advised by Professors Marja Bakermans (BBT) and Beth Eddy (HUA)

The Problem
Runoff is destructive toward cities and ecosystems alike. The excess water floods sewer systems and pollutes local waterways.

Methods
- Interview Elizabeth Tomaszewski
- Find location for system
- Data collection
- Data manipulation
- Specifics of system

Solution
Our solution is a rainwater collection system designed for the rooftop of the new Foisie Innovation Studio.

Data
Residential Water Usage
- Toilets: 42%
- Other: 27%
- Showering: 31%

48 in of rainfall per year
48,125 ft³ of water potentially collected

Next Steps
- Water quality laws
- Filtration research
- Cost vs Benefit
- Implementation?

Acknowledgements
Thank you to Elizabeth Tomaszewski for providing us the necessary data and Peter Emidy for creating the model.
