

Are You the One?

Familial Hypercholesterolemia in Worcester, MA

Camryn Berry (BME), Shanna Bonanno (BME), Michelle Fleming (ME), Deborah Fontanez (ME), and Talia Vaughn (BME)
 Advisors: Professor Jill Rulfs and Professor Helen Vassallo

Goal

To reduce the number of people suffering from undiagnosed Familial Hypercholesterolemia (FH) in Worcester, Massachusetts.

What is FH?

A genetic disease that causes dangerously high levels of cholesterol.

High Risk
 Heart Attack
 Stroke

Early Death
 Life expectancy reduced by 15-30 years.

Where?

Focused on Worcester, MA

- Accessible
- Has locations that attract ethnicities with higher prevalence to FH

Acknowledgements

Special thanks to Tammy Berry RN, Joe Dainis, Dr. Dervilla McCann, Jim Monaco, Jill Rulfs, and Helen Vassallo for their contributions to FamHype's program in Worcester, MA.

Method

Fill out emergency and consent form

A finger prick will test total cholesterol levels.

Lab will notify patients of cholesterol levels.

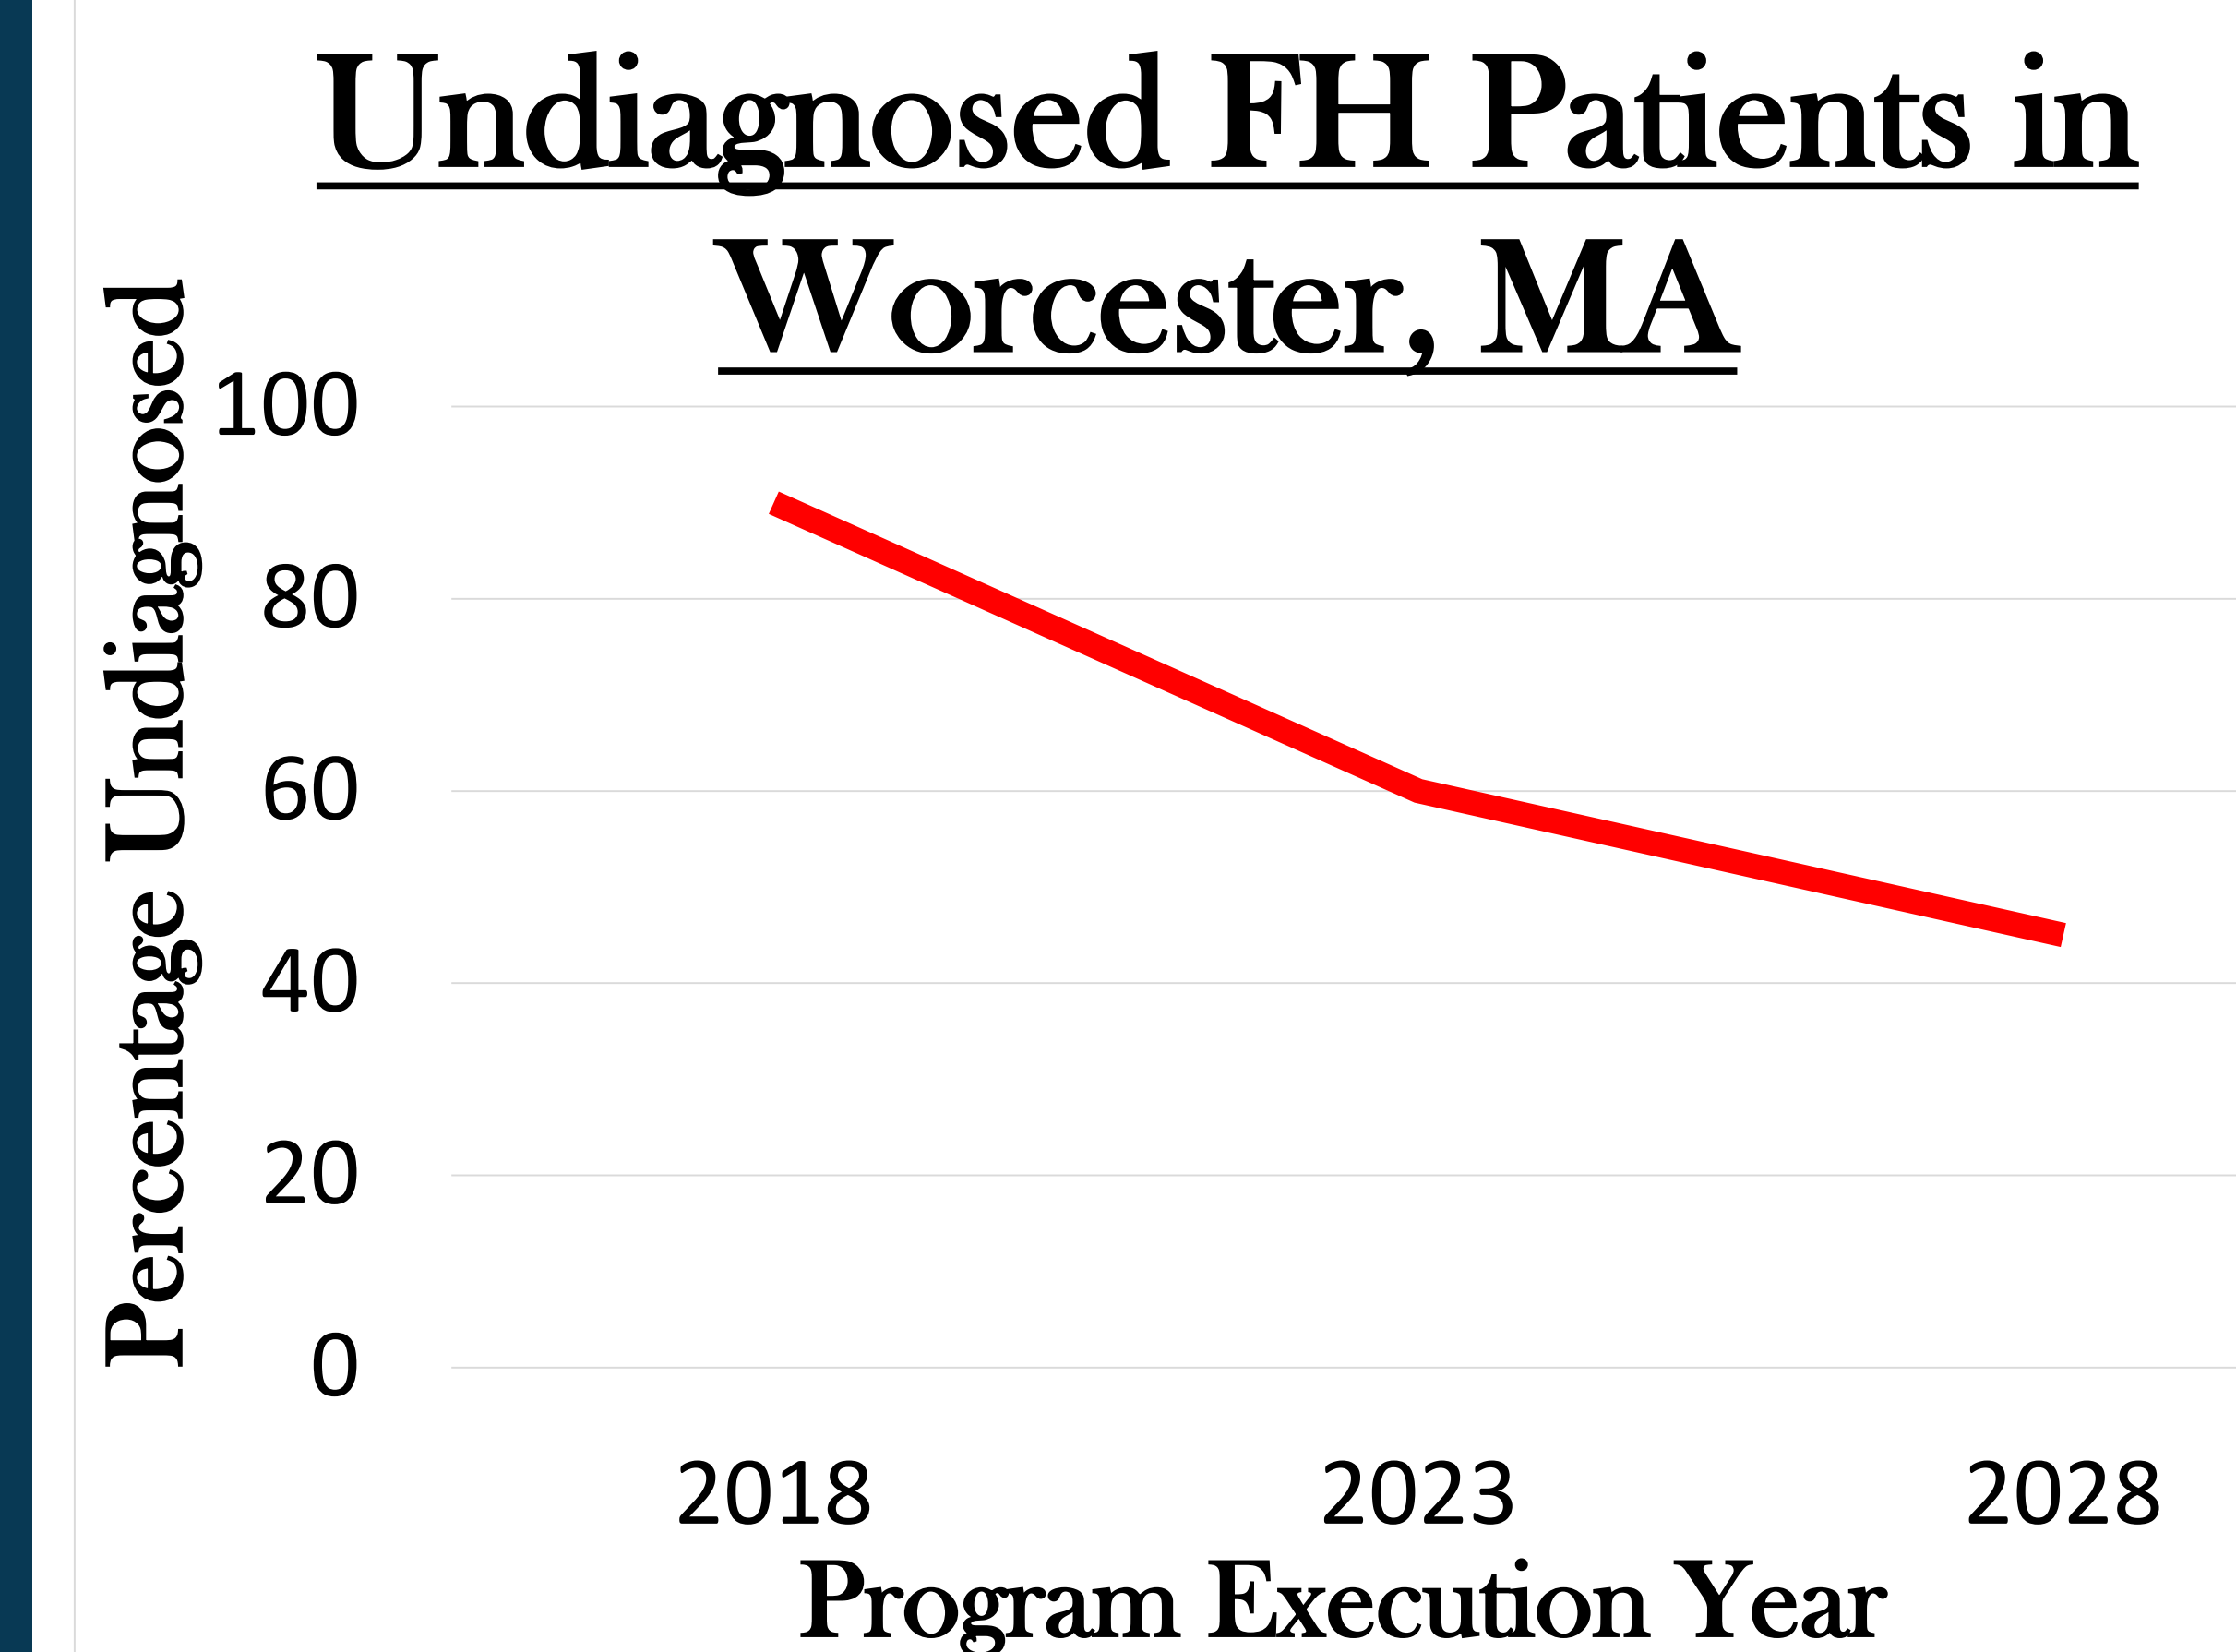

Patients will be referred to PCP for further testing

Future Plans

Expected Results

Conclusion

- Funding increases, as the program and FH becomes more well-known
- Percent of undiagnosed FH cases continue to drop over the years
- Deaths by heart attack and stroke decrease
