The coordinated efforts of Statitrol's Territory 5-S Representative, Tom McSherry, and Lakewood distributor, Bill Hyatt (Hyatt Safety Systems), who both also represent Delta Products of Grand Junction, CO., have culminated in this innovative system.

Two options exist at present. The basic system incorporates Delta's Model 230-MB Digital Transmitter; the medical option (with hand-carried RF transmitter/receiver by Transcience) is Delta's 230-MBM medical pack, and allows the victim of a heart attack, for example, to trip the same dialer (from a range of approximately 200 ft.), which then dials in a different code from the fire signal.

The dispatcher puts the code number into a visual display unit, which then gives all necessary information -- in the case of a fire, this includes the occupant's name, address, prominent nearby cross streets, etc.

If the medical emergency code is given, a basic medical history is programmed in, so that rescue units have all necessary and vital information.

As such systems become more sophisticated, in the future, it is expected that in-car units would also have video receivers, making the relay of information even faster.

For sales information, you may contact Everett Bell, Marketing Manager of Delta Products, Grand Junction, Colorado. His phone number is (303) 242-9000.
``HE GET LETTERS''

"I am recovering from a broken hip. The threat of fire has always worried me, but never more than why I have been confined to my home. On July 31, less than 24 hours after I left, SmokeGard was installed. I was called to the phone while cooking breakfast. Engrossed in the conversation, I was startled by a piercing noise from my SmokeGard. Fortunately, I was able to extinguish the stove fire without the need for the fire department. There was no visible smoke around the detector and if I had to leave the house I would have had ample time. Thank you for introducing me to SmokeGard."

-- Ms. Grace Owen, Ilion, New York

"Enclosed is a picture of our 12x60 mobile home, which was destroyed by fire Dec. 6. The least damaged portion was our bedroom. When we saw least damaged I mean only a few recognizable items remained. The kitchen, dining and living areas were completely destroyed, as was the front bedroom, which was the children's room. By the Grace of God and your SmokeGard alarm, everyone escaped without injury with the exception of our little girl's pet dog, which we never found."

-- Mrs. William Capps, Cyersburg, Tenn.

"On April 8, 1976 at 5:30 AM, our SmokeGard detector went off, due to a fire on the inside wall due to a space heater. There were only minor damages, thanks to the smoke detector."

-- Mr. Russell Emerson, Detroit Beach, Michigan

Huffy Letter Got Action

It is a sad window on our times when The Observer seems to the only way the consumer is able to get satisfaction from many suppliers of goods and services. But I want to relate an unreal experience I recently had what I thought to be a defective smoke detector called SmokeGard, manufactured in Colorado. I followed the return instructions, though I admit my letter to them was a bit huffy. I received a replacement unit (insured mail), instructions and packing for the return of the defective unit; a note with the hope my family would be kept safe, and a mere 32 cents in post-age, the correct amount to return the unit. More power to such a company, (SmokeGard), and I'm still in a state of shock."

SmokeGard
HITS THE IOWA NEWS!

On Jan. 4, KCRG-AM (Cedar Rapids) ran a news "ment of" residential fires, which included two of my friends. The program discussed Every Level Protection, and included a statement from an area builder who has installed many units. Thanks to Jack Linderman of Midwest Equipment for telling us about it.

Did you know?

About one-third of the 1975 home fire victims were children under 16. A fourth of these had been left alone or without proper supervision.

There's a SmokeGard for every location. Even a fire professional can get confused, with so many different models available. Which should you choose or recommend?

For economy and ease of installation, and because of codes, most new construction utilizes the wired-in Model 900A.

For existing homes, for renters or in areas of frequent power outages, the battery-powered Model 990A may be a better answer. It's easily removed if you move. There's no lapse of protection in case of an outage.

For existing homes, the new Model 900B Line-Cord version is a third alternative. If there's a non-switch controlled outlet within 8 feet of your best alarm location, you can have plug-in convenience (with safety-lock plug protector) with no batteries to replace.

We also have models that interconnect, or have relay capability.

Whichever you choose, there's no better protection than SmokeGard, with the patented Duo-Centric chamber.

Write for more information on our alarms, and on the value of Every Level Protection; then make your choice.

This ad will run in the February issue of FIRE COMMAND and the March issues of FIRE CHIEF, FIRE JOURNAL, FIREHOUSE and a new magazine: INTERNATIONAL FIRE CHIEF (published by IAFC).

Hundreds of concerned companies now protect their employees (and their families) round-the-clock, through a professional Off-The-Job Safety Program, designed by Statitrol, the protection pioneers.

Vital life-safety knowledge in an educational program, plus group savings on the priceless protection of SmokeGard home smoke alarms, and it won't cost you a cent. Isn't this the program you've been looking for? Write or call today for our free brochure. Let our representative tailor an Off-The-Job Safety Program to your company's needs.

This ad will run in January and February NATIONAL SAFETY NEWS, January and February OCCUPATIONAL HAZARDS, and January PROFESSIONAL SAFETY.
